**North American Cable Equipment, Inc. Announces
A Distribution Agreement With Pixel Technologies for
XM and Sirius Satellite Radio Into Multiple Dwelling Units**

May 20, 2008 – WEST CHESTER, PA – North American Cable Equipment, Inc. (NACE) announced today an agreement with Pixel Technologies, Inc. to distribute that company's complete line of products for the delivery of XM and Sirius satellite radio into the multiple dwelling unit (MDU) market. NACE will market Pixel's antennas, antenna extensions, power inserters, taps, splitter kits, amplifiers, adapters, isolation components, XM and Sirius installation test kits, and custom cable to its network of System Operators that design, install and operate satellite television systems for MDU properties.

"Through our agreement with Pixel Technologies, NACE and its System Operators can now offer complete satellite entertainment solutions – television as well as radio – to commercial and residential MDU properties", said Aaron Starr, North American Cable Equipment's President and CEO. "Apartment dwellers, condo and co-op owners, lodging guests, timeshare visitors, college students, hospital patients, mall patrons, office building tenants and assisted living residents will now have access to satellite radio as they do with satellite TV. Even better, property owners and managers can now offer another value-add service to make their property even more attractive to residents and guests", continued Starr.

North American Cable Equipment, Inc. founded in 1992 with headquarters in West Chester, Pennsylvania and sales and distribution facilities in Pennsylvania, Florida, Missouri, and Nevada is a leading supplier of electronics, cable, and installation materials to the data, security, satellite TV, CATV, and communications industries.
